

1

UNROLL

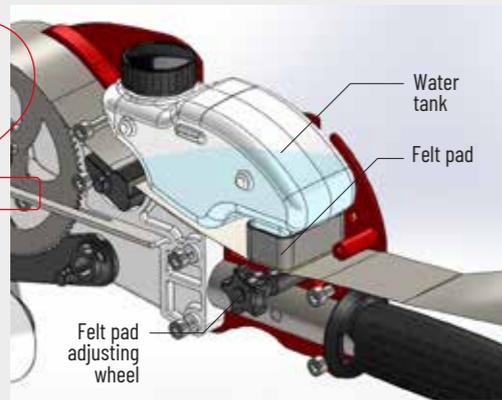

2 stainless steel sprockets running in sealed bearings to drive the tape effortlessly.

2

MOISTEN

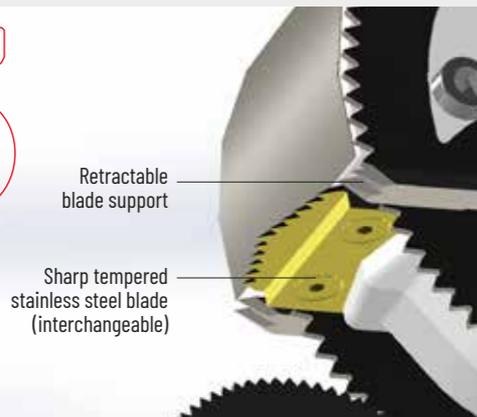

Moisten the paper tape on the plaster side during application, to improve adhesion and limit bubbles from forming.

3

CUT

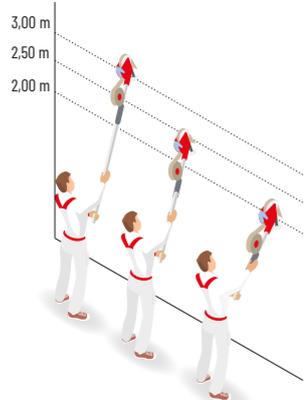

The triggers on the poles are used to operate the blade for a clean cut.

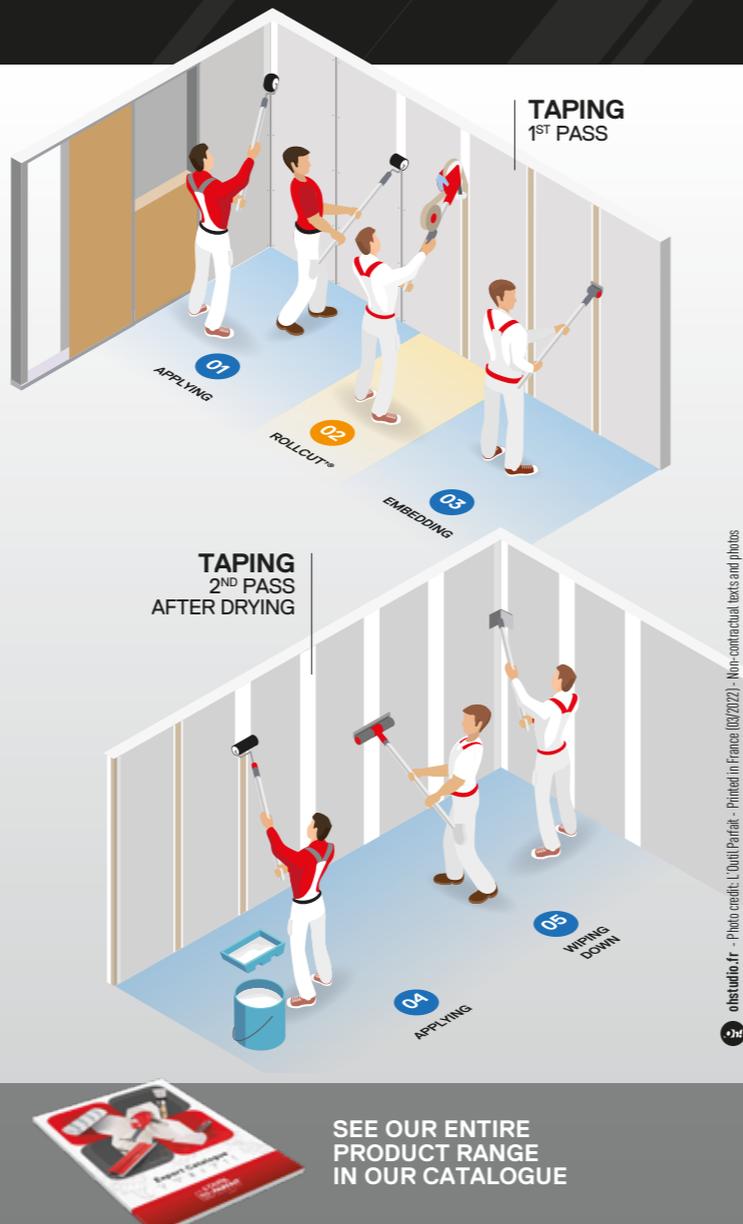

4

ADAPT

Supplied with 2 extensions to accommodate a working height of up to 3m.

THE BEST SOLUTION FOR TAPING AND FINISHING WALLS

FIGHTS AGAINST MUSCULOSKELETAL DISORDERS

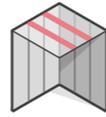

RollCut® : FOR PERFECT APPLICATION OF PAPER JOINTING TAPE!

FLAT WALLS

Once the compound has been applied, unroll the tape from bottom to top. Pull the trigger to cut the tape. You can now wipe down the tape.

CEILING

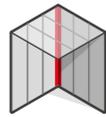

To apply tape to the ceiling, install the extension of your choice depending on the height and access. Possibility of working at heights of 3 metres.

HARD TO REACH AREAS

Laying of tapes in hard to reach and tight areas. The RollCut® without extension fits in a space of 1 m. (e.g. Cupboards, corridors, toilets, etc.)

CORNERS

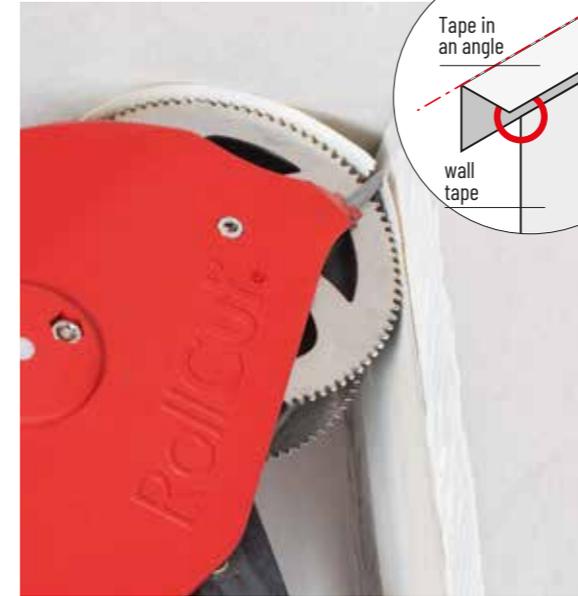

When applying the corner tape from bottom to top, swap the rollers. The tape is automatically shaped to fit the angle. Top tip: the corner DécoLiss® is designed to smooth out the tape and facilitate wiping down.

CEILING EDGES

You are advised to use the big extension to apply tapes to angles and improve efficiency by reducing fatigue.

OPTIMUM JOINT

The cut is designed to prevent overlapping of the tape on walls and angles.

BENEFITS

PRODUCTIVITY

Time saving: based on a typical wall and ceiling project, Roll'Enduit & Roll'Cut halve the application time of jointing tape.

Easy to use: no need to measure, climb on the ladder, pre-cut the tapes, pre-shape the corners, etc.

ERGONOMIC

- Lightweight design
- Fights against musculoskeletal disorders
- Limits falls by working on the floor
- Easy to clean as it is virtually dirt-free (safe to clean with water)

TEAMWORK

1 person buttering and 1 person applying for greater productivity.
